Let Your Light Shine – Matthew 5:16

Through the Maths Calculation Policy, the school will promote and teach the values we learn based on the example of the Christian faith:

- Forgiveness
- Respect for self and others
- Reconciliation and redemption
- Truth and honesty
- Trust and fairness
- Tolerance and compassion
- Self-discipline
- Respect for property and the environment
- Politeness

Such values, in turn, promote not only the Christian ethos and aims of Middleforth Church of England Primary School, but assist in the preparation of the children for the responsibilities and duties of adult life.

Vision

As a caring, Christian community, we aspire to 'let our light shine'. We will open up the world to celebrate God's wonderful creation and foster a sense of awe and wonder.

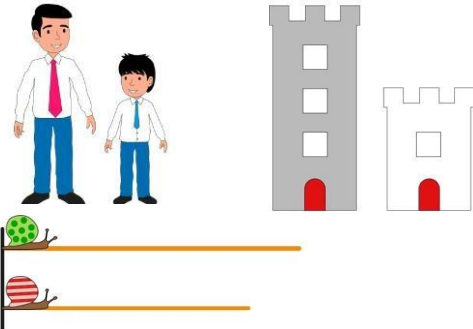

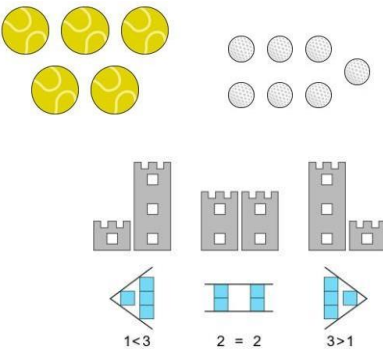

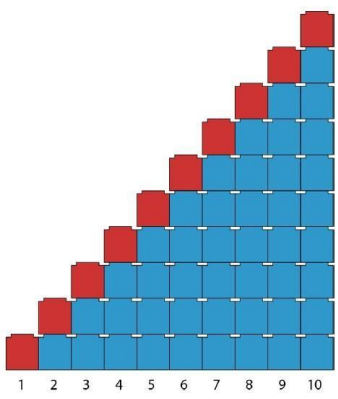

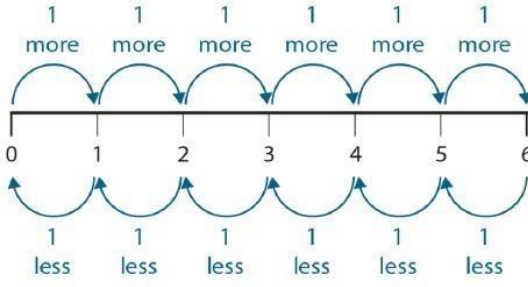

We will nurture our God given talents to ensure that everyone reaches their full potential academically, socially and spiritually.

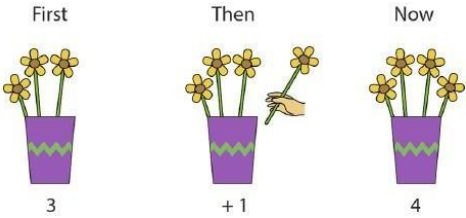

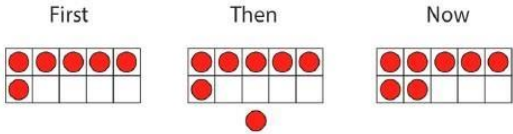

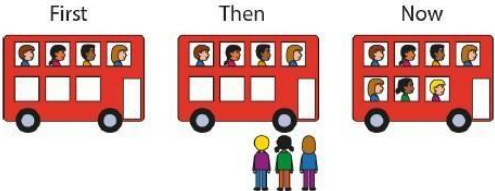

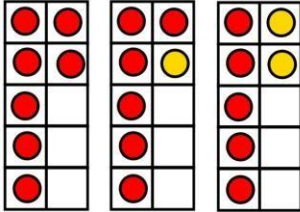

'Let your light shine Matthew 5.16'

Abstract

Divide 2 & 3 digit numbers by 1 digit
Short Division

$96 \div 3$
Use place value counters to make groups of the divisor, starting with the largest value digit.

There are 3 groups of 3 tens. There are 2 groups of 3 ones.

There is 1 group of 3 tens. There is a ten left over. We exchange this for 10 ones. 12 ones divided by 3 is 4.

There is 1 group of 4 hundreds. There are no groups of 4 tens and 3 tens left over. There are 8 groups of 4 ones after exchanging the left over tens.

Students use drawn diagrams with spots or circles to show their understanding.

Begin with divisions that divide equally with no remainder.

Move on to divisions with a remainder. Return to concrete if necessary.

Divisibility rules in numerical order	
2	A number is divisible by 2 if the ones digit is even.

4	If halving a number gives an even value, then the number is divisible by 4. <i>and</i> For numbers with more than two digits: if the final two digits are divisible by 4 then the number is divisible by 4.
5	A number is divisible by 5 if the ones digit is 5 or 0.

Long Division—3 digits divided by 2 digits

$$\begin{array}{r} \text{H} \quad \text{T} \quad \text{O} \\ 31 \overline{) 4 \quad 3 \quad 4} \end{array}$$

$$\begin{array}{r} \text{H} \quad \text{T} \quad \text{O} \\ 0 \\ 31 \overline{) 4 \quad 3 \quad 4} \end{array}$$

We combine the 4 hundreds with the tens to give 43 tens. 31 goes into 43 once which is 31, we record this underneath.

$$\begin{array}{r} \text{H} \quad \text{T} \quad \text{O} \\ 0 \quad 1 \\ 31 \overline{) 4 \quad 3 \quad 4} \\ \underline{3 \quad 1} \\ 1 \quad 2 \end{array}$$

$$\begin{array}{r} \text{H} \quad \text{T} \quad \text{O} \\ 0 \quad 1 \quad 4 \\ 31 \overline{) 4 \quad 3 \quad 4} \\ \underline{3 \quad 1} \\ 1 \quad 2 \quad 4 \\ \underline{1 \quad 2 \quad 4} \\ 0 \end{array}$$

We subtract to show there is no remainder

We combine 12 with the next digit to give 124.

Long Division—progressing to 4 or more digits

$$\begin{array}{r} \text{TH} \quad \text{H} \quad \text{T} \quad \text{O} \\ 23 \overline{) 4945} \end{array}$$

23 goes into 49 twice which is 46. We subtract this from 49 to give a remainder of 3.

We combine the 3 left over with the next digit to give 34. 23 goes into 34 once with 11 remaining.

$$\begin{array}{r} \text{TH} \quad \text{H} \quad \text{T} \quad \text{O} \\ 2 \quad 1 \quad 5 \\ 23 \overline{) 4945} \\ \underline{46} \quad \quad \\ 34 \\ \underline{23} \\ 115 \\ \underline{115} \\ 0 \end{array}$$
